## Education

- |  |                                     |
|--|-------------------------------------|
| <b>Columbia University</b><br><b>MS in Computer Engineering</b> , GPA: 3.6/4.0   | New York, NY<br>Aug 2023 – Dec 2024 |
| <ul style="list-style-type: none"><li>• <b>Coursework:</b> Algorithms, Cloud Computing, Formal Verifications, Blockchain, Database, Computer Networks, Embedded Systems, Hardware Security, Modeling and Performance, Reinforcement Learning, Content Delivery Networks</li></ul>  |                                     |
| <b>Ohio State University</b><br><b>BS in Electrical and Computer Engineering</b> , GPA: 3.5/4.0  | Columbus, OH<br>Aug 2018 – Dec 2022 |
| <ul style="list-style-type: none"><li>• <b>Honors:</b> Cum Laude, Dean's List for SP 2020, AU 2020, SP 2021, AU 2021, SP 2022, and AU 2022</li><li>• <b>Teaching Assistant</b> of Digital Logic Jan 2022 – May 2022</li><li>• <b>Coursework:</b> Operating System, Computer Architecture, Advanced Digital Design, Software Development and Design</li></ul> |                                     |

## Research Projects

- |   |                                     |
|---|-------------------------------------|
| <b>Ohio State University</b><br><b>GAN - Adding Noise to Discriminator</b>  | Columbus, OH<br>Jan 2022 - Dec 2022 |
| <ul style="list-style-type: none"><li>• Developed an automated fuzzing system to enhance image quality by dynamically adding noise to the discriminator and implementing a feedback mechanism to adjust noise based on model performance, optimizing the training process.</li><li>• Created training and testing datasets in Python with defined epochs and learning rates for both the generator and discriminator.</li><li>• Monitored and analyzed loss trends to evaluate the impact of noise on the discriminator's ability to improve generated image quality.</li></ul> |                                     |
| <b>Cornell University</b><br><b>Smart Cane (Assistive Technology)</b>   | Ithaca, NY<br>June 2022 - July 2022 |
| <ul style="list-style-type: none"><li>• Developed and integrated a Robot Operating System (ROS) embedded system using Raspberry Pi to control ultrasonic sensors, vibration motors, and cameras for real-time navigation and obstacle detection for blind users.</li><li>• Implemented A* path planning and PID control algorithms using Python to optimize movement and ensure precise navigation.</li><li>• Programmed in Python to process sensor data, control actuators, and manage haptic feedback for user guidance.</li></ul>   |                                     |

## Academic Projects

- |   |                                     |
|---|-------------------------------------|
| <b>Columbia University</b><br><b>Reinforcement Learning - Emotion Propagation</b>   | New York, NY<br>Aug 2024 - Dec 2024 |
| <ul style="list-style-type: none"><li>• Developed EmotionWorld 2D environment and optimized emotion propagation using Python and Deep Q-Network (DQN) reinforcement learning, simulating emotion diffusion in social networks.</li><li>• Leveraged DQN and graph theory to model emotion propagation dynamics, incorporating personalized emotion parameters (e.g., spread rate, duration, and radius) and utilizing experience replay and target Q-networks to train agents for optimal emotion spreading.</li><li>• Visualized the emotion propagation process in real-time with Pygame, fine-tuned the model through hyperparameter adjustments, and enhanced performance and stability through Epsilon exploration-exploitation strategies.</li></ul>     |                                     |
| <b>Columbia University</b><br><b>Blockchain-based Content Distribution Verification Mechanism</b>   | New York, NY<br>Aug 2024 - Dec 2024 |
| <ul style="list-style-type: none"><li>• Designed and implemented a blockchain-based content distribution verification mechanism with Python, which integrates blockchain and Merkle Tree technologies to ensure data integrity and security in a content delivery network (CDN).</li><li>• Developed a decentralized solution utilizing Proof of Work (PoW) and Merkle Trees for real-time data validation and tamper detection, ensuring the reliability of content delivered across distributed nodes.</li><li>• Simulated a CDN network that successfully verified and distributed content, incorporating blockchain for trust and Merkle Trees for efficient data integrity checks, demonstrating robust handling of data tampering and repair.</li></ul> |                                     |

**Columbia University**

New York, NY

**ARM TrustZone Streaming Client Project (Hardware Security)**

Jan 2024 - Aug 2024

- Designed and implemented a secure streaming media client using C++ based on ARM TrustZone (TZ) technology to ensure the confidentiality of video content
- Developed a Rich Application (RA) to receive encrypted video streams from the server and pass them to the Trusted Application (TA) for decryption
- Created the TA application to securely store the private key and provide video decryption functionality, leveraging the OP-TEE framework to simulate the communication between TEE and Rich Execution Environment

**Columbia University**

New York, NY

**Formal Verification (CDN Proxy System)**

Aug 2023 - Dec 2023

- Utilized Promela language and SPIN model checker to perform formal verification of a CDN proxy system, ensuring the security and stability of multithreaded concurrent communication.
- Validated the system's safety properties (e.g., preventing deadlocks, ensuring mutual exclusion, avoiding message corruption) and liveness properties (e.g. message retransmission), enhancing system reliability and fault tolerance.
- Designed and verified a proxy system handling multiple concurrent client requests, addressing DNS load balancing and thread synchronization issues, and used SPIN for state-space exploration to detect and resolve potential deadlocks and resource conflicts, improving system efficiency and error detection.

**Columbia University**

New York, NY

**Build An Online Job Search Platform**

Aug 2023 - Dec 2023

- Crafted an intuitive user interface with customizable features through the AWS Management Console with a group
- Leveraged Amazon's Simple Storage Service (S3) as the primary storage mechanism for all application data and Python as the implementation language, ensuring high security, real-time updates, and efficient data management
- Adopted a modular approach by designing and deploying different modular using AWS microservices

**Ohio State University**

Columbus, OH

**Anti-Racist: Air Quality Analysis and Awareness Project**

Aug 2022 - Dec 2022

- Collected particulate matter data across 14 zip code regions in Columbus, OH using GP2Y1010AU0F and KEYESTUDIO PM2.5 sensors.
- Analyzed air quality disparities between affluent, predominantly white neighborhoods and underserved, racially diverse communities.
- Built an interactive website to visualize collected data, explain project findings, and provide resources for community-led studies.

## **Skills and Technologies**

---

**Languages:** Python, C++, C, Java, C#, SQL, Assembly, Promela, SystemVerilog, VHDL, HTML

**Technologies:** ARM Cortex-M, STM32, Raspberry Pi, FPGA, Robot Operating System (ROS), Oscilloscope, ARM TrustZone, OP-TEE, Secure Boot, AES, RSA, DH, Merkle Trees, Blockchain, Secure Key Storage, Git, Ethernet, TCP/IP, Pandas, NumPy, Matplotlib, AWS, GCP, Azure, MySQL, ArduinoIDE, Xilinx, MATLAB, Git, Docker, Google Colab, Jupyter Notebook, PyTorch, TensorFlow
